Subj: SUMMARY OF METEOROLOGICAL OBSERVATIONS, SURFACE (SMOS)

have The product has Our revised update includes the period of record (POR) through 1986 for all hourly and daily data. Our revis production methodology incorporates two computerized editing phases after the initial processing stage and manual review and intervention of suspect data prior to the print phase. Every effort has been made been expanded to include station climatic summary tables and is considered a stand alone publication. switched to a direct computer printout on standard computer paper instead of the previous print format. at least a 99.9 percent data perfect product based on the stations observation data. This edition of the SMOS was produced utilizing a revised software package.

phenomena and obstructions to vision, derived from 3-hourly observations, and is presented in two tables as follows: Weather Conditions. This summary is a percentage frequency occurrence of various atmospheric

By month, all years combined, by standard 3-hour groups and all hours combined.

Table 14 By month and annual, all hours and years combined, by wind direction

Occurrences of the various phenomena included in each category on the forms are listed below:

- Thunderstorms All reported occurrences of thunderstorm, tornado, and waterspout.
- Rain and/or drizzle All liquid precipitation, falling to the ground, not freezing. .
- <u> Freezing raun and/or freezing drizzle (glaze) Precipitation falling in liquid form, but freezing</u> contact with an unheated surface
- grains, Show hail), " Included are snow, sleet, snow pellets (soft Snow and/or sleet crystals.
- e. Hail Occurrences of hail and small hail are included.
- one or more of the above phenomena occurred. Since more than one type of precipitation may be reported in the same observation, the sums of the individual categories may exceed the total columns. Percentage of observations with precipitation - Included in this category are the observations 910
- . Fox Included are fog, ice fog, and ground fog.
- Smoke and/or haze Occurrences of smoke, haze, or combinations of smoke and haze are included
- Blowing anow Occurrences of blowing snow also drifting snow when reported from non-WBAN sources
- Dust and/or sand Included are blowing dust, blowing sand, and dust.
- k. Blowing spray This item if reported, is not shown in a separate category on this table included in the computation Percentage of Observations with Obstructions to Vision.

obstruction may be reported in the same observation, the sums of the individual categories may exceed the percentage total columns. Also, although precipitation may reduce visibility, it is not considered an obstruction to vision for purposes of this summary; therefore, the percentage total of obstructions to vision of type observations when one or more of the above obstructions to vision occurred. Since more than one category this i,n Included obstructions to vision need not reflect the total observations with reduced visibility. Percentage of observations with

Percentages observations may vary among tables within the same month and period. may not always equal 100.0 due to rounding practices. NOTE: The total number of

- phenomena. These data are obtained from all recorded information on ö the percentage of This summary is a presentation reporting forms and combined into a daily observation. Atmospheric Phenomena Table 36: occurrences of various atmospheric
- categories summarized in these tabulations. However, it should be noted that in this summary the columns headed "% OF OBS WITH PRECIP" and "% OF OBS WITH OBST TO VISION" show the percentage of days rather than percentage of observations. Since more than one type of precipitation or more than one type of obstruction may occur in the same daily observation, the sum of the values in the individual columns may not equal the above also apply of the phenomena in the Weather Conditions Summary descriptions total columns
- This presentation is by month with annual totals, and is prepared with all years combined <u>.</u> م
- A day with rain and/or drizzle was not separately reported in WBAN data prior to January 1949 Therefore percentages in this column are restricted to the period January 1949 and later.

day with dust and/or sand was punched and included in this summary only when visibility was less

- These elements are presented Precipitation, Snowfall and Snow Depth. extreme value.
- daily mean monthly and 10 provide for each element separately the percentage frequency of various by month and annual, all years combined. The percentage of days with measurable amounts monthly and annually. Also shown for the precipitation and snowfall tables, are the mont mean amounts (sum of monthly mean amounts), and the extreme monthly amounts Tables 8, 9. annual computed amounts, anounts least).
- 21 for each element presents the extreme daily amounts by individual month and entire period of record available. Table
- extreme and the means and standard deviations for each month and annual for all months combined. and 25 provide for each element separately individual year and month Tables 23, 24. amo un ta
- as follows Snow depth was recorded and punched at various hours during the period available from U.S. stations. The periods and hours used in the snow depth summary vary by service and period NOTE 1:
- U.S. Navy and Weather Bureau Stations:

From beginning of record thru Jun 52 - Snow depth at 0030 UTC Jul 52 - May 57
Jun 57 - present
Snow depth at 1200 UTC

Jan 1956, Hail was included in snowfall occurrence in the summary of the day observation prior to and after Dec 1979. .. MOTE

5. Surface Winds.

- January 1964. When 90% or more of the daily observations of peak gust wind data are available for a month, the extreme is selected and printed. These values are then used to compute means and standard deviations for the entire period. Every month of a year must have valid observations present before the ALL MONTHS value is selected for that year. Means and standard deviations are computed when four or more values are present for any column. A supplementary list of Peak Gusts by year-month with <90% observations reported is also directions a. <u>Extreme Values - Peak Gusts Table 27</u>: Derived from daily observations and presented by individing year and month for the entire period of record available. Speeds are presented in knots, while directivers are given in 16 compass points from the beginning of record through 1963, and in tens of degrees starting
- Bivariate percentage frequency tabulations: Derived from hourly observations, these tabulations are a percentage frequency of wind directions to 16 compass points and calm by wind speeds (knots) in increments of Beaufort classifications. Percentages are shown by both direction and speed, and in addition the mean wind speed for each direction. A separate category is provided on the form for variable winds, which are reported in some data sources. In these data where light and variable winds are reported with no directions column headed but with speeds given, the speeds will be summarized in the appropriate groups opposite the

Table 1 contains three presentations prepared for all surface winds included, and for all years combined

- (a) By month by standard 3-hour groups
- By month all hours combined
- (c) Annual all hours combined

in 16 classes from zero to equal to or greater than 10 miles. Data are derived from 3-6. Ceiling Vergus Visibility Table 2. This summary is a bivariate percentage frequency distribution classes of ceiling from zero to equal to or greater than 20,000 feet and as a separate class no ceilin hourly observations, and three sets of tables are presented as follows: visibility

- 1) By Month by standard 3-hour groups
-) By Month all years and all hours combined
- ;) Annual all years and all hours combined

βý Due to the cumulative nature of this presentation, it is possible to determine the percentage frequency independently referring to totals in the extreme right hand column. Also, visibility may be determined independently reference to the horizontal row of totals at the bottom of the page. The percentage frequency for which station was meeting or exceeding any given set of minimal may be determined from the figure at intersection of the appropriate ceiling column and visibility row. Several examples in the use of the in combination of ceiling be determined independently occurrence for any given limit of ceiling or visibility separately, or in visibility. The totals progress to the right and downward. Ceiling may be tables are shown on on the following pages.

EXAMPLES FOR USE OF CRILING VERSUS VISIBILITY TABLES IN THIS TABULATION

	0 1	7)	65.6				gr. 1		100.0
	ž N		\ \							
	8/18		/							
	% A		\rangle							
	% AJ									
	% Al									
res	21							97.4		98.3
VISIBILITY (STATUTE MILES)	× ×)_							
HORUTY (ST	%1≥									
Š	N 3	_(()							96,9
	× 2%									
	£ 23	(91.0						95.4
	7 2									
	N N									
	Ņ		\backslash							
	2	_)(/					-		
CERTING	Ē	NO CERTIFIC		× 1900 × 1500	% ₩ 80 80 80 80 80	N N	N N 8 8	N N	N N	N N 8 o

For ö ^ headed right Read ceiling values independently of visibility under column at instance, from the table: EXAMPLE # 1:

Ceiling \geq 1500 feet = 92.6%. Ceiling \geq 500 feet = 98.1%.

From the tables: Read visibilities independently of ceilings on bottom line opposite > 0. EXAMPLE * 2:

Visibility ≥ 3 miles = 95.4%. Visibility ≥ 2 miles = 96.9%. Visibility ≥ 1 mile = 98.3%.

the To obtain combinations of ceiling with visibility, read figure at intersection of categories; i.e.: Ceiling > 1500 feet with visibility > 3 miles = 91.0%

EXAMPLE * 4: Values below minimums stated in the table may be obtained by subtracting the value given in the table from 100%. Thus, to obtain the percentage of observations with ceiling < 1500 feet and/or visibility < 3 miles, subtract the value read from the table at the intersection, which is 91.0, from 100.0. The answer 9.0 is the percentage of observations with ceiling < 1500 feet and/or visibility < 3 miles.

obtained percentage of observations with ceiling < 500 feet and/or visibility < 1 mile is 2.6, by subtracting 97.4 from 100.0. EXAMPLE # 5: To find the percentage of observations falling within the two categories given in example above, subtract the value read from the table for the first set of limits from the value in the table for the second set of limits. The difference will be the percentage of observations meeting the lower set of limits, but not meeting the higher set of limits. The value 91.0 read from the table at the intersection of \geq 1500 feet with \geq 3 miles, subtracted from 97.4 read from the table at the intersection of \geq 500 feet with \geq 1 mile is equal to 6.4%. Thus; 6.4 percent of the observations meet the criteria: ceiling \geq 500 feet with visibility \geq 1 mile, but < 3 miles; or ceiling \geq 500 feet, but < 1500 feet with visibility \geq 1 miles.

Since these tabulations are prepared in several ways including by month, by 3-hour groups it is possible to determine diurnal variations of ceiling and visibility limits as well as probabilities of various ceiling-visibility combinations.

This summary is prepared from 3-hourly observations and is a percentage frequency It is presented as follows: distribution of total sky cover (see Note 3) and total number of observations. Sky Cover Table 11.

By month and annual - by standard 3-hour groups, and all hours combined.

MOTE: #1: Sky cover (total cloud amount) was not reported by U.S. Services until mid 1945. Data, when available, were punched for Air Force stations beginning in 1946, but were not available for Navy stations until 1948 or 1949. NWS stations recorded total cloud amount in remarks beginning sometime in 1945, but few stations have punched data prior to 1948. This summary will, of course, be limited to period of available

to tenths prior to summarizing, and notation is made on the form to indicate that data were originally reported in oktas. The manner of conversion is given below: These have been converted Some data sources used for this summary report cloud amounts in oktas. The manner of conversion is given below:

TENTHS 0	rs	.	യ	80	O)	10
						obscured)
						(o
OKTAS 0	~ 0	6 0	4° EO	Ø	7	6 0

8 nsed NOTE: #3: Beginning in 1981 the symbols of Clear, Scattered, Broken, Overcast, and Obscured were input for the Total Sky Cover. Following are the conversions:

0/10 equates to clear 1/10 to 5/10 equates to scattered 6/10 to 9/10 equates to broken 10/10 equates to overcast

8. Paychrometric Summaries.

tenths of temperature by 5-degree Fahrenheit increments, plus mean temperature, standard deviation, and total number of observations in three separate tables as follows: Cumulative percentage frequency of occurrence - derived from daily observations and presented frequency These tabulations provide the cumulative percentage and annual for all years combined. month

Table 5 Daily maximum temperature Table 6 Daily minimum temperature Table 7 Daily mean temperature

- day for entire period of record available are average temperature, average and extreme maximum temperature, Table 29 derived observations and presented for each Daily Average/Extreme Temperatures average and extreme minimum.
- Extreme values derived from daily observations with extreme value given for each year and month record available. Extremes are provided for a month if all days for a month contain valid observations. months for a year must have valid extremes before the ANNUAL value is selected for that year. Means standard of daily extreme temperatures are prepared:

Extreme maximum temperature Extreme minimum temperature Table 30

NOTE: A supplementary list also provides extreme temperatures when less than a full month is reported.

- <u>Bivariate percentage frequency distribution and computations of dry-bulb versus wet-bulb temperature</u> Table 3. This tabulation is derived from 3-hourly observations and is presented by month and annual, hours and all years combined. The following information is provided:
- bulb depression is 17 classes spread horizontally; by 2-degree intervals of dry-bulb temperature vertically. Also provided for each dry-bulb temperature interval is the total number of observations with dry-bulb and wet-bulb temperature combined; and again for dry-bulb, wet-bulb, and dew-point temperatures separately. Total observations for these four items is also provided in two lines at end of each tabulation table. The main body of the summary consists of a bivariate percentage frequency distribution of

A percentage frequency in this table of '.0' represents one or more occurrences amounting to less than

- (2) Statistical data for the individual elements of relative humidity, dry-bulb, wet-bulb, and dew-point temperatures are shown in the section at the bottom left of each page. These consist of the sum of squares $\{X^{A}\}$, sums of values $\{X\}$, means $\{X\}$, and standard deviations (σ_X) . The number of observations used in the computations for each element is also shown.
- of dry-bulb, wet-bulb, and dew-point temperatures, and total number of hours possible in the period nted. Mean number of hours is shown to tenths and indicates mean number of hours per year in the At the lower right of each page Table 40 gives the mean number of hours of occurrence annual summary, or mean number of hours per month in the tabulations by month. represented.

to 1949, nor subsequent to June 1958; and was computed by machine methods for observations recorded during these periods. All values of dew-point temperature and relative humidity are with respect to Relative humidity usually temperature usually was not reported prior to 1946. water, unless otherwise indicated. Wet-bulb reported prior

d. Means and standard deviations. These tabulations are derived from hourly observations and present the mean, standard deviation, and total number of observations for the eight standard 3-hour groups, by month and annual and again at the bottom for all hours combined. Records for all years available are combined. Tables are prepared for the following:

Wet-bulb temperature Dry-bulb temperature Table 15

Dew-point temperature Table 16 Table 17

from hourly observations and presents the cumulative percentage frequency of occurrence of relative humidity by increments of 10% classes, plus the mean relative humidity and total number of observations in two tables. Cumulative percentage frequency of occurrence of relative humidity Table 12. This summary is derived

being Month and Annual - by standard 3-hour groups, and all hours combined with the hour groups the vertical argument. All years are combined for this summary.

This f. <u>Percentake frequency of ogcurrence of dry-bulb temperature versus wind direction</u> Table 4. tabulation is derived from hourly observations and is presented by month and annual, all hours and combined. The main body of the summary consists of dry bulb temperatures spread vertically in five increments and horizontally by eight wind directions (plus calm). 9. <u>Pressure Summary</u>. Two tables giving the means, standard deviations, and total number of observations of station pressure and sea-level pressure by month and annual for the local hourly observations corresponding to the eight 3-hourly synoptic times UTC. The same computations are also provided at the bottom of the page for all hours combined. All years of data available are combined in both of these tables.

Table 18 Station pressure in inches of mercury

Table 19 Sea-level pressure in millibars

pressure pressure latitude scale Provided below is a scale to convert station pressure values in inches of mercury or millibars to latitude in 1000's of feet. This scale is an enlarged model of the pressure latitude scale Smithsonian Meteorological Tables.
